# DOOM - 32 player deathmach

v1.0 (en), xiando

Doom is a classic violent deathmach game originally made by ID Software.

---

## 1. [doomlegacy](#)

- ◆ [1.1. Installation notice](#)
  - ◆ [1.2. Selecting doomgame / .wad](#)
  - ◆ [1.3. Firewalls](#)
  - ◆ [1.4. freedoom](#)
  - ◆ [1.5. Other maps](#)
- 

## 1. doomlegacy

doomlegacy is a free engine for playing Doom. It supports up to 30 players in one game. [doomlegacy](#) is capable of using the doom and doom2 (and compatible) .wad (maps) files.

The engine is free, the original Doom 1 & 2 IWAD files from ID are not. Alternative free IWAD gamemaps are available.

[doomlegacy](#) runs smoothly on Pentium2 350 MHz, and is highly recommended for lan multiplayer fun - specially if you have a few old boxes handy.

[doomlegacy](#) can be played multiplayer on the Internet and/or a LAN.

## 1.1. Installation notice

Gentoo: `emerge doomlegacy`

For playing multiplayer games, [doomlegacy](#) needs write permission in the folder where the .wad file used is located on the **clients** . If not, you will get the message `Error: Can't create file $$$$.sav : disk full ?`.

To prevent this, grant write access to the folder where the wads are located, usually `/usr/share/games/doomlegacy/` :

```
chmod g+w /usr/share/games/doomlegacy/
```

## 1.2. Selecting doomgame / .wad

Start doomlegacy with `-iwad` to select what game you want to start. (doom.wad, doom2.wad, plutonia.wad, tnt.wad are available on p2p)

```
llxdoom -iwad /usr/share/games/doomlegacy/plutonia.wad
```

## 1.3. Firewalls

[doomlegacy](#) uses UDP port 5029, so this port must be open in order to play start a multiplayer game.

The command for opening this port on a firewall using iptables:

```
IPTABLES=/sbin/iptables
$IPTABLES -A INPUT -j ACCEPT -p udp --dport 5029
```

## 1.4. freedoom

[freedom](#) is a project to create a complete Doom II-compatible IWAD file which is Free Software, all from scratch.

The project has made one release, Version 0.1, which is 15,901 kB, playable and quite entertaining.

For a great. free game, download and install [freedom](#) and [doomlegacy](#) ..

*Gentoo Linux:*

```
emerge freedoom
```

**Freedoom does NOT come with multiplayer maps, and can therefore only be used in singleplayer mode!**

## 1.5. Other maps

There are a few sites dedicated to Doom WAD files (sad to say most of them lack quallity), including:

- [newdoom](#)
- [DLW](#)
