

X Window System Version 11 Release 6.8.0

LinuxReviews.org

The long awaited version 6.8.0 of the X.org implementation of the X Window System will be announced and available today. Development has finally moving rapidly forward after years of stagnation in Xfree development. The latest version of the essential Linux building block that handles screen rendering, keyboard input and other important underlying parts of any Linux Desktop system has many significant improvements.

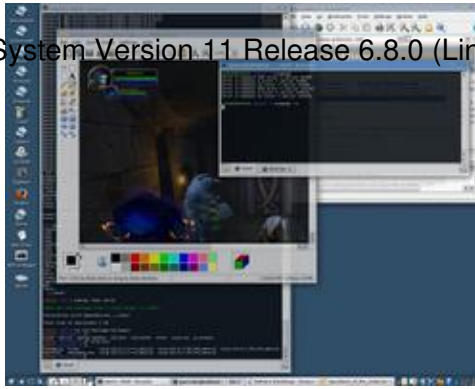

X11R6.8.0 is a free Open Source version of the X Window System, runnable on most UNIX(R) and UNIX-like operating systems (such as Linux, FreeBSD, Solaris x86, NetBSD and OpenBSD).

The X.Org Foundation is expected to make an announcement later today and make the sources available for download shortly.

Take a look at some X11R6.8.0RC4 screenshots to get a glimpse at the new features:

- REAL transparency,
- Drop shadows
- Overall better stability and performance
