Fedora Core 3 Test 2 announced

LinuxReviews.org

A new test-version of the upcoming Fedora Core 3 is released and available. It features the latest Linux desktops, KDE 3.3.0 and Gnome 2.8RC, and uses X.org X11 6.8.0 as X server.

The highlights are:

- The device model now uses a dynamic /dev (provided by udev), a nice improvement compared to using a static /dev
- [Gnome 2.8](#) release candidate
- [KDE 3.3.0](#)
- [X.org X11 6.8.0](#)
- More than hundred other programs have been updated to the latest version.

[Fedora](#) Core 3 Test 2 is available on a four-disc CD set.

This is a test release aimed at experienced users! Developers encourage users to report all problems at [redhat bugzilla](#) under product 'Fedora Core', release 'fc3test2'.

You can download Fedora here:
