

Mandrakelinux 10.1 Community released

LinuxReviews.org

Mandrakelinux 10.1 Community is available from Mandrakesoft. The biggest improvements are done in the area of mobility, hardware support and the package management system. The included software packages are as always updated to the latest versions available at the release-time.

A full feature list is available at

<http://www.mandrakelinux.com/en/10.1/features/>

Find a location close to you on the [list of download mirrors](#) if you want to try out a user-friendly Linux distribution for beginners.

Mandrake Linux 10.1 actually includes the obviously needed, yet commonly left out third party packages like the Flash player, java environment and the useless Realplayer media player. It also comes complete with third-party drives from NVIDIA and ATI, among others.

A full DVD ISO image is available to Mandrakeclub Gold Members, Mandrakesoft is supported financially by members of this club and buy people purchasing at their <http://www.mandrakestore.com/> . The DVD ISO is also available on your friendly local peer to peer network, but do consider spearing a dime for the French company who were on the brick to being stuck bankrupt some time ago.
