

# KDE 3.4 Release Candidate 1 is available

*LinuxReviews.org*

KDE is a mature, complete desktop system for Linux. A new and exiting version 3.4 is expected mid-march. Release Candidate 1 is now available for those who can afford to run experimental software in order to aid the development.

There are numerous improvements over 3.3.x, speed, usability and smoothness are the keywords.

Se our article [What is New in KDE 3.4](#) for screenshots and a review of the new features.
