

Linux Kernel 2.6.11 Released

LinuxReviews.org

The kernel is the most basic and important part of any GNU/Linux system. The new version should be even more stable and secure. It also has something exciting: InfiniBand support.

The 2.6.11 kernel is available from kernel.org. Packages for most distributions

The [Intel InfiniBand](#) Aims to make communication between processors in large clusters more efficient, making it simpler to build supercomputing systems using clusters using a large number of affordable computers.
