

GnomeMeeting 1.2.1 available!

lr

GnomeMeeting allows you to call free to others who have Internett by means of any of the standard audio protocols. It is a free, open, working alternative to Skype and IP-telephones It is worth a look.

GnomeMeeting works excellent with the IPv6 protocol. It is also possible to use it even if you only have yesterdays protocol, IPv4.

Here is the list of changes:

- Fixed deadlock when changing the audio volume in some special cases
- Small UI improvements (Eskyl Bilund)
- Fixed leaks in DBUS component (Julien Puydt)
- Fixed contributors list in the about dialog
- Allow compilation against Evolution Data Server 1.0 and 1.2
- Fixed problematic callback with GTK+ 2.6
- Prevent GnomeMeeting from running when the Picture plugin is not present
- Fixed various IPv6 problems (Craig Southeren)
- Fixed problems with some Polycom Units (Hannes Friederich)
