

Converting text files between Windows and UNIX

v1.0 (en), xiando

Converting text files between Windows format to UNIX format and vice versa

The way textfiles are formatted differs between Windows and Unix. If you open a textfile made in notepad under unix you will find that it has ^M where there should be a new line.

Convert a text file from Windows/dos to unix:

```
tr -d '\015' < win-format.txt > unix-format.txt
```

Convert a text file from unix to Windows/dos:

```
sed -e 's/$/\r/' unix-format.txt > win-format.txt
```
